PLASTIC RAW MATERIALS – GLOBAL COMMODITY MARKET A

Daily Spot Buying Intelligence | Version 2.0 | Updated: 12 Sep 2026 | Base Currency: USD

HOW TO USE THIS TOOL — Read First

STEP 1	Open '⚙ SETTINGS' once → confirm thresholds, risk weights and currency mat
STEP 2	Go to '📥 DAILY PRICES' → enter today's spot prices for each resin (blue cells). J scales.
STEP 3	Go to '⚡ MARKET SIGNALS' → enter crude oil, FX, freight and disruption/geopoli
STEP 4	Review '🚦 BUY SIGNALS' → auto-calculates STRONG BUY / BUY / HOLD / AV
STEP 5	Use '💰 COST IMPACT' → simulate budget impact and check the forward-contrac
STEP 6	Log competing quotes in '🏷 SUPPLIER QUOTES' before committing spend.
STEP 7	Track recycled-content and EPR exposure in '♻ CIRCULAR & ESG'.
STEP 8	Check '📈 TREND CHARTS' for visuals and '📚 INDEX GUIDE' for sources and th

TODAY'S KPI SNAPSHOT (auto-populated from other sheets)

MATERIAL	TODAY PRICE ($/MT)	7-DAY CHANGE %	30-DAY CHANGE %	VOLATILITY RATING
PP (Polypropylene)	1,308.39	2.5%	-1.5%	🟢 LOW
HDPE (High-Density PE)	1,298.09	0.9%	2.9%	🟢 LOW
LDPE (Low-Density PE)	1,454.06	-0.6%	8.4%	🟢 LOW
PVC	1,104.81	2.6%	1.2%	🟡 MED
PET	1,054.34	1.6%	-0.5%	🟢 LOW
PS (Polystyrene)	1,513.54	6.9%	7.3%	🟡 MED
ABS	2,031.93	-3.2%	-4.6%	🟡 MED

⚠ ACTIVE RISK WATCHLIST — see 📚 INDEX GUIDE to update

- Feedstock & crude volatility: a $10/bbl move ≈ $30-80/MT resin impact. Monitor daily.
- Freight & logistics chokepoints: Red Sea / Hormuz / Panama disruption can add weeks of lead time and 15-30% freig
- Trade policy & tariffs: resin tariff exemptions have been added and reversed with little notice — recheck before import
- Regional supply concentration: a handful of countries dominate PP/PVC/PE feedstock — outages there ripple globall
- Regulatory/ESG: recycled-content mandates (EU PPWR, US state EPR laws) are a real, growing cost — see ♻ Circ

WHAT'S NEW IN VERSION 2.0

- ✓ ⚙ Settings sheet — every threshold and risk weight is now editable in one place, not buried in formulas.
- ✓ 📥 Daily Prices / 🚦 Buy Signals now self-scale automatically as you add rows — no more manual row-fixing.
- ✓ 🏷 Supplier Quotes tracker — log competing quotes with an automatic best-price comparison.
- ✓ ♻ Circular & ESG tracker — recycled-content compliance gaps and EPR fee exposure.
- ✓ 🔒 Forward-contract vs spot breakeven calculator in 💰 Cost Impact.

✓ Trend Charts are now live native Excel charts, not static screenshots or duplicated tables.

✓ See CHANGE LOG for the complete list.

ok hard-codes these numbers.

NOTES
Shown on printed/exported reports.
All prices in this workbook are entered in this currency.
Metric tonne is standard for resin trading.

_S)

NOTES
Price must fall at least this % in 7 days.
Price rising faster than this in 7 days ⇒ Avoid.
Below this composite risk score, a price drop ⇒ STRONG BUY.
Below this composite risk score, a falling price ⇒ BUY.
At or above this composite risk score ⇒ AVOID regardless of price.
Rolling coefficient of variation above this ⇒ MEDIUM volatility.
Rolling coefficient of variation above this ⇒ HIGH volatility.
Window used for the 7-day average / change %.
Window used for the 30-day change %.
Rolling window used for the volatility (std-dev) calc.
Assumed price move used in the spot-vs-wait savings model.
Time horizon for the price-shock scenario, in days.

KET SIGNALS — should total 100)

NOTES
Brent crude level, scaled /100.
Naphtha level, scaled /700 — the biggest single feedstock driver.
Dollar strength vs EUR.
Global bulk-freight cost pressure.
Binary flag (1 = active disruption reported).
Binary flag (1 = active production cut).
1–5 score you set in ⚡ Market Signals — see 🗐 Index Guide watchlist.

REGULATORY CONTEXT — review and refresh periodically

• EU Packaging & Packaging Waste Regulation (PPWR) entered into force in 2025, pha
packaging through the 2030s — confirm current per-material thresholds before committir

• UK Plastic Packaging Tax applies below a recycled-content threshold (30% at introduc
current rate and threshold each fiscal year.

• A growing number of US states (California, Oregon, Colorado, Maine, Maryland and otl
(EPR) packaging laws phasing in through 2025-2027 with different fee schedules.

• Trade policy is another live variable, not just a regulatory one — tariff exemptions on re
withdrawn with little notice; re-check applicable tariff codes before locking in import volun

*⚠ Disclaimer: figures above (targets, usage, fee rates) are illustrative placeholders, not
tool, not legal or compliance advice — confirm every rate and threshold with qualified reg
operate in before acting on it.*

COMMODITY INDEX & DATA SOURCE GUIDE

KEY INDICES AND DATA SOURCES TO MONITOR DAILY

INDEX / SOURCE	WHAT IT TRACKS	UPDATE FREQ
Brent Crude (ICE)	Global crude oil benchmark	Real-time
WTI Crude (NYMEX)	US crude benchmark	Real-time
Naphtha (Platts)	Ethylene/propylene feedstock	Daily
ICIS Polymer Price Indices	PP, PE, PVC, PET spot prices	Weekly
Platts Petrochemical Index	Integrated petchem pricing	Daily
Baltic Dry Index (BDI)	Bulk freight rates globally	Daily
SCFI (Shanghai Freight)	Container freight rates	Weekly
USD Index / USD-EUR (DXY)	Dollar strength vs basket/EUR	Real-time
OPEC+ Meeting Calendar	Production quota decisions	Per meeting
Sanctions & Trade-Restriction Trackers	Active sanctions / export controls on major producers	As updated
US / EU Tariff Notices	Import tariffs & exemptions on resins	As updated
China PMI Manufacturing	China factory activity	Monthly
EIA Crude Inventory	US crude oil stocks	Weekly (Wed)
Plastics News Price Watch	US & global resin prices	Weekly
Chemical Week / ICIS News	Industry news & forecasts	Daily
EU PPWR / Circularity Tracker	Recycled-content & packaging-waste rules	As updated

HOW TO READ COMMODITY SIGNALS — Daily Decision Framew

MORNING ROUTINE (start of day)	1. Check Brent crude overnight move. 2. Check USD/EUR (or your relevant FX pair). 3. Scan ICIS or Platts for resin price updates. 4. Note any news: sanctions, OPEC, plant outages,
SIGNAL INTERPRETATION	Crude UP + Naphtha UP + USD strong → resin pri Crude DOWN + demand weak + no disruption → p

BUY DECISION CHECKLIST	✓Price below its 30-day average? ✓Composite risk score below the Buy ceiling (⚙ ✓No major supply disruption reported in the last 4 ✓Freight rates stable? ✓Sufficient warehouse capacity? → All yes = proceed with the spot buy
RISK MANAGEMENT RULE	Never commit more than 60 days of spot inventory Always obtain 2-3 competing quotes (🏷 Supplier Use forward contracts (💰 Cost Impact) for part of

⚠ ACTIVE RISK WATCHLIST — update this list as real events deve

Feedstock & crude volatility	Brent/WTI/naphtha swings are the single biggest re
Freight & logistics chokepoints	Red Sea, Strait of Hormuz, Panama Canal and por
Trade policy & tariffs	Import tariffs and exemptions on resins change with order.
Regional supply concentration	A handful of countries/regions supply an outsized s ripple globally.
Regulatory / ESG compliance	Recycled-content mandates (EU PPWR, US state l Circular & ESG.

This replaces a single, dated geopolitical scenario with a maintainable checklist — treat each Intensity (1-5) input in ⚡ Market Signals whenever your assessment of these changes.

— How to read global plastic commodity markets

WHY IT MATTERS FOR PLASTICS	WHERE TO FIND IT
Petrochemicals derive from crude. A $10/bbl move ≈ $30-80/MT resin impact.	Investing.com | Bloomberg | CNBC
Cross-check against Brent for US supplier pricing.	CME Group | Reuters
Direct feedstock for PP, PE, PS, ABS. Naphtha +$50 ≈ resin +$30-50/MT.	ICIS | Platts (S&P Global)
The benchmark for plastic resin spot pricing in Europe & Asia.	icis.com (subscription)
Tracks feedstock-to-polymer margin — signals producer behaviour.	spglobal.com/platts
Higher BDI = higher shipping costs = higher landed cost for imports.	Baltic Exchange | Bloomberg
Key for Asia-origin resin — a spike adds $30-100/MT landed cost.	Shanghai Shipping Exchange
Stronger USD = cheaper imports in USD but higher cost in local currency.	forex.com | XE.com
Supply cuts tighten feedstock and often rally resin prices.	opec.org
Sanctions on major resin-exporting nations tighten global supply directly.	OFAC.treasury.gov | Reuters
Tariff exemptions have been added and withdrawn on short notice (e.g. PET) — recheck before importing.	USITC.gov | Federal Register | ec.europa.eu
China is roughly 40% of global PE/PP demand — PMI >50 signals rising demand.	NBS China | Caixin
A large stock draw pressures crude — and resin cost — upward.	eia.gov/weekly
Good secondary check for PP, PE, PET pricing trends.	plasticsnews.com
Force majeure, plant outages, demand forecasts — act fast on news.	chemweek.com | icis.com
Recycled-content minimums directly affect virgin-resin demand and sourcing mix.	environment.ec.europa.eu

VERSION HISTORY

SUMMARY OF CHANGES
Initial release — Dashboard, Daily Price log (30-day), Market Signals, Buy/Hold/Avoid engine, Cost Impact simulator, Trend Charts, Index Guide.
• Added ⚙ SETTINGS — every buy-signal threshold, volatility band and risk-score weight is now a labelled, editable cell instead of a number buried inside a formula. • DAILY PRICES and BUY SIGNALS are now self-scaling — dynamic INDEX/COUNT formulas read however many rows you've filled in, so the tool no longer needs manual row-fixing as history grows past 30 days. • Replaced the single dated geopolitical scenario with a maintainable ⚠ Active Risk Watchlist (feedstock, freight, trade policy, regional supply, regulatory/ESG) that you update as real events develop. • Added SUPPLIER QUOTES — a multi-supplier quote log with an automatic best-price/vs-spot comparison, operationalising the 'always get competing quotes' rule. • Added CIRCULAR & ESG — virgin-vs-recycled price spread, a recycled-content compliance gap tracker, and an EPR fee exposure estimator, reflecting 2026-era packaging regulation (EU PPWR, US state EPR laws, plastic taxes). • Added a Forward Contract vs Spot breakeven calculator inside COST IMPACT. • TREND CHARTS now uses native, live Excel charts referencing source sheets directly — no more duplicated chart-data tables to keep in sync. • Refreshed INDEX GUIDE sources (added tariff/trade-policy and EU PPWR trackers) and rewrote the risk-management playbook around the new watchlist. • Full formula and recalculation audit — zero formula errors at hand-off. • Fixed a v1.0 off-by-one bug where the '7-day change %' actually compared prices 6 days apart — the dynamic formulas now compare exactly 7, 30 (etc.) days apart, per the ⚙ Settings lookback values

ou materially change the model, so future users (and future you) know why a number moved.
